A LITTLE ABOUT THESE PRESETS

These collections makes no adjustments to the exposure slider - allowing you to make these changes as needed on your photo before you apply the preset. Most of the collections make no changes to the white balance either - except where deemed necessary in the artistic coloring of the preset. All of the presets are 100% adjustable.

Once you install them, I recommend you pick a few photos and scroll through the presets to get a feel for how they will react to your photos and picking the one you like best.

Then, you can go through the setting and tweak and fine tune them to best fit your photo.

MAC & PC INSTALL

ADOBE CAMERA RAW

7.3 AND UP - LIGHTROOM CLASSIC

How to install the Adobe Camera Raw Presets:

1- Once you download your product you will have a zip file. In the zip file, you will find the .xmp extension files.

2 - Locate your Adobe folder on your hard drive

On Mac, this folder is: ~/Library/Application Support/Adobe/

On Windows: C:\ProgramData\Adobe\

3 - Locate the Camera Raw folder in your Adobe folder

4 - Locate the "Settings" folder inside the Camera Raw folder

5 - Paste the presets in this folder and restart your program.

**** You can also import your presets from within your program by going to "file" and "import develop files and presets", navigate to your preset folder, and import... but I have found that it wants to import individual presets this way and not the whole folder. Since I like the presets organized in folders instead of in the main "user presets" area - I use the above install method.**

****If you are working on a Windows machine and cannot find the files listed - you will need to google how to unhide the files on your machine for whichever version of Windows you are working on. For some reason, Windows hides half your files from you!**

***If you are working on a Mac and cannot find your Library Menu - be sure you are holding down your OPT key while clicking on the GO menu so it shows up for you. It is hiding.**

Note: These instructions are posted here as a courtesy to you. Adobe is coming out with new versions of its products all the time. The version you have may vary slightly from the versions these instruction were created from. If that is the case - simply follow the instructions from Adobe to install the presets.

*****You'll need to be an Adobe Creative Cloud subscriber to install these in Lightroom Mobile.**

****You'll need Lightroom 7.3 or later - that's when Adobe switched the Lightroom file format to .xmp files so they could work in Camera Raw and Photoshop also. That update occurred in 2018 and I no longer have the ability to create the older .lrtemplate files for you. I highly recommend you update as they are continually adding new features!**

MAC & PC INSTALL

7.3 AND UP - LIGHTROOM CC & MOBILE

To import the Adobe Camera Raw Presets:

To install import the .xmp files into the mobile app - you need to have the Lightroom CC desktop app (This is different than the Lightroom Classic program) installed on your desktop computer. You'll need to import them into your desktop program first, then sync them to your mobile app via the Adobe Creative Cloud feature. You'll need to be connected to the internet to sync your programs.

You can check out the differences on the Adobe site here:

<https://www.adobe.com/products/photoshop-lightroom-classic.html>

And watch a video here on it: <https://video.tv.adobe.com/v/20577/?quality=6&autoplay=true&hidetitle=true>

- 1 - Open your program on desktop and: Go to File > Import profiles & presets**
- 2 - Select the folder on your computer with the preset folder inside of it. Click the "Import" button. (You can also click on the "presets" folder in the lower right corner to bring up the preset panel also - click on the 3 dots in the upper corner and use the import option from there)**
- 3 - Open the Lightroom CC mobile app on your mobile device.**
- 4 - Make sure you are logged into your Adobe Creative Cloud account on your device so it will sync to your desktop program.**
- 5 - Navigate to presets icon in the bottom right of your toolbar in the app.**
- 6 - Here you will see the presets installed (synced).**

Note: These instructions are posted here as a courtesy to you. Adobe is coming out with new versions of its products all the time. The version you have may vary slightly from the versions these instruction were created from. If that is the case - simply follow the instructions from Adobe to install the presets.

***You'll need to be an Adobe Creative Cloud subscriber to install these in Lightroom Mobile.
